

Instructions for the Use of global® HP

(Catalogue Numbers: GLHP-030, GLHP-060)

PRECAUTIONS AND WARNINGS

- Caution:** Federal Law (USA) restricts this device to sale by or on the order of a physician (or properly licensed practitioner).
- Caution: The user should read and understand the Instructions for Use, Precautions and Warnings, and be trained in the correct procedure before using global® HP for the culture of human embryos from zygote to blastocyst, embryo transfer.
- Not to be used for injection.
- Do not sterilize.
- Do not use if product if:
 - the product packaging appears damaged or if the seal is broken
 - the expiry date has been exceeded
 - the product becomes discolored, cloudy, or shows evidence of particulate matter
- This product contains human serum albumin, a derivative of human blood. The human serum albumin used in the preparation of this product has been tested for hepatitis viruses, including hepatitis C virus (HCV), hepatitis B surface antigen (HBsAg), and hepatitis B e antigen (HBeAg). The manufacturer has also included selection of donors, screening of individual donations and plasma pools for specific markers of infection and the inclusion of established manufacturing steps for the inactivation/removal of viruses. Despite this, when medicinal products prepared from human blood or plasma are administered, the possibility of transmitting infective agents cannot be totally excluded. This also applies to unknown or emerging viruses and other pathogens. There are no reports of virus transmissions with albumin manufactured to European Pharmacopoeia specifications by established processes. It is strongly recommended that every time that global® HP is administered to a patient, the name and batch number of the product are recorded in order to maintain a link between the patient and the batch of the product.
- global® HP contains the antibiotic gentamicin sulfate. Appropriate precautions should be taken to ensure that the patient is not sensitized to this antibiotic.
- To avoid problems with contamination, practice aseptic techniques.
- Discard unused medium within 7 days of opening. Do not use after expiry date.

GENERAL INFORMATION

Indications for Use

Culture of human embryos from zygote to blastocyst, embryo transfer.

Storage and Shelf Life

Store at 2-8°C and protected from light. Ten (10) weeks from the date of manufacture.

Disposal Consideration

Treat or dispose of waste material in accordance with all local state/provincial, and national requirements. Dispose with laboratory waste.

Composition

A bicarbonate-buffered protein-supplemented medium replete with glucose, lactate, pyruvate and all 20 amino acids is optimal to support the growth and development of human embryos *in vitro*.

Sodium Chloride, Sodium Pyruvate, L-Tyrosine, Potassium Phosphate, L-Asparagine, L-Lysine, Magnesium Sulfate, L-Glutamic Acid, L-Leucine, Glycyl-L-Glutamine, Sodium Bicarbonate, Glycine, L-Lysine, EDTA, Glucose, L-Proline, L-Methionine, Phenol Red, Sodium Lactate, L-Serine, L-Phenylalanine, Human Serum Albumin* (8.8 mg/ml), Human α- and β-globulins* (1.2 mg/ml), Gentamicin Sulfate* (10 µg/ml)

*from therapeutic-grade source material

QUALITY CONTROL SPECIFICATIONS

Assay (performed for each batch)	Specification
Physicochemical Tests	
pH (with 5% CO ₂)	7.2-7.4
Osmolality	260-270 mOsm
Biological Tests	
Endotoxin (LAL)	≤ 0.5 EU/ml
Sterility Test (bacterial and fungal screen, SAL 10 ⁻³)	PASS
Biological Assays	
1-cell Mouse Embryo Assay (% expanded blastocysts at 96 h of culture)	≥ 80%

Special Note on the CO₂ Concentration in the Incubator: In most cases, a 5-7% concentration of CO₂ in the incubator will produce a pH of 7.2 to 7.4 in global® HP. However, the exact concentration of CO₂ required to produce the optimum pH of approximately 7.30 (7.27-7.33) depends on several factors, including the physical characteristics of incubator and the altitude. Consequently, we strongly recommend that each laboratory determine and use the concentration of CO₂ that is required to produce a pH of 7.30 in global® HP.

INSTRUCTIONS FOR USE

The procedures described below have been found to be effective for the culture of human embryos from zygote to blastocyst, embryo transfer and are offered only as examples. Every laboratory must define and optimize its own procedures.

- Prepare culture dishes containing 25-100 µl droplets or in larger volumes (0.5-1.0 ml) of global® HP under oil, according to general laboratory practice.
- Before introducing the embryos, place the culture dishes in the incubator for sufficient time to ensure CO₂ and temperature equilibration. Depending on the exact configuration, this may take from 24-48 hours. Equilibration will require less time if the oil and medium have been pre-equilibrated.
- On Day 1, place the zygotes into the equilibrated global® HP. Culture the embryos for 48 h (Day 3, 4-8 cell stage).
- On Day 2, transfer the embryos to the cleavage-stage embryos to fresh droplets or larger volumes of global® HP, and culture to Day 5. For further culture to Day 6, transfer the embryos to fresh droplets or larger volumes of global® HP.
- For transfer on Day 3 (cleavage stage) or Day 5/6 (blastocyst stage) wash the embryos, according to general laboratory practice, and transfer to the uterus in 20-30 µl of equilibrated global® HP.
- Immediately prior to transfer, rinse the transfer catheter with global® HP.

Mode d'emploi de global® HP

(Références catalogue: GLHP-030, GLHP-060)

PRÉCAUTIONS ET MISES EN GARDE

- Attention: Selon la loi fédérale américaine, ce dispositif ne peut être vendu que par un médecin ou sur prescription médicale (ou par un praticien agréé).
- Attention: L'utilisateur doit lire et comprendre le mode d'emploi, les précautions et mises en garde, et avoir reçu une formation adéquate sur la procédure avant d'utiliser global® HP pour la culture d'embryons humains du stade de zygote au blastocyste et le transfert d'embryons.
- Ne convient pas pour une injection.
- Ne pas stériliser.
- Ne pas utiliser ce produit si :
 - l'emballage du produit semble déterioré ou si le scellage est endommagé
 - la date de péremption est dépassée
 - le produit est décoloré, trouble ou montre des signes de particules étrangères
- Ce produit contient de l'albumine sérique humaine, un dérivé du sang humain. L'albumine sérique humaine utilisée dans la préparation de ce produit a été chauffée à 60°C pendant deux heures.
- Attention: Les mesures standard visant à prévenir les infections résultant de l'utilisation de médicaments préparés à partir de sang ou plasma humain comprennent la sélection des donneurs, le dépistage de marqueurs spécifiques d'infections dans les dons individuels et les pools de plasma et l'inclusion d'étapes de fabrication efficaces pour l'inactivation/élimination des virus. En dépit de ces mesures, le risque de transmission d'agents infectieux ne peut être totalement exclu d'administrations de médicaments préparés à partir de sang ou plasma humain. Ceci s'applique aussi à des virus inconnus ou émergents ou à d'autres agents pathogènes. Aucun cas de transmission virale n'a été rapporté avec l'albumine fabriquée selon les procédures établies dans le respect des spécifications de la Pharmacopée Européenne. A chaque administration de global® HP chez un patient, il est fortement recommandé de consigner le nom et le numéro de lot du produit afin de pouvoir à tout moment faire le lien entre le patient et le lot du produit.

AUTOGLOMÉTRE INFORMATIONEN

Anwendungshinweise für global® HP

VORSICHTSMASNAHMEN UND WARNUNGEN

1. Achtung: Laut Bundesgesetz (USA) darf dieses Produkt nur durch einen Arzt oder auf Anweisung eines Arztes (oder eines ordnungsgemäß autorisierten Praktiziers) verkauft werden.

2. Achtung: Der Benutzer sollte die Verwendungshinweise, Vorsichtsmassnahmen und Warnungen lesen und verstehen sowie vor der Verwendung von global® HP für die Kultur menschlicher Embryonen von der Zygote bis zur Blastozyste und für Embryo-Transfer im korrekten Umgang damit geschult werden.

3. Auf Day 1, place the zygotes into the equilibrated global® HP. Culture the embryos for 48 h (Day 3, 4-8 cell stage).

4. On Day 2, transfer the embryos to the cleavage-stage embryos to fresh droplets or larger volumes of global® HP, and culture to Day 5. For further culture to Day 6, transfer the embryos to fresh droplets or larger volumes of global® HP.

5. For transfer on Day 3 (cleavage stage) or Day 5/6 (blastocyst stage) wash the embryos, according to general laboratory practice, and transfer to the uterus in 20-30 µl of equilibrated global® HP.

6. Immediately prior to transfer, rinse the transfer catheter with global® HP.

7. Auf Day 1, place the zygotes into the equilibrated global® HP. Culture the embryos for 48 h (Day 3, 4-8 cell stage).

8. On Day 2, transfer the embryos to the cleavage-stage embryos to fresh droplets or larger volumes of global® HP, and culture to Day 5. For further culture to Day 6, transfer the embryos to fresh droplets or larger volumes of global® HP.

9. For transfer on Day 3 (cleavage stage) or Day 5/6 (blastocyst stage) wash the embryos, according to general laboratory practice, and transfer to the uterus in 20-30 µl of equilibrated global® HP.

10. Immediately prior to transfer, rinse the transfer catheter with global® HP.

11. Auf Day 1, place the zygotes into the equilibrated global® HP. Culture the embryos for 48 h (Day 3, 4-8 cell stage).

12. On Day 2, transfer the embryos to the cleavage-stage embryos to fresh droplets or larger volumes of global® HP, and culture to Day 5. For further culture to Day 6, transfer the embryos to fresh droplets or larger volumes of global® HP.

13. For transfer on Day 3 (cleavage stage) or Day 5/6 (blastocyst stage) wash the embryos, according to general laboratory practice, and transfer to the uterus in 20-30 µl of equilibrated global® HP.

14. Immediately prior to transfer, rinse the transfer catheter with global® HP.

15. Auf Day 1, place the zygotes into the equilibrated global® HP. Culture the embryos for 48 h (Day 3, 4-8 cell stage).

16. On Day 2, transfer the embryos to the cleavage-stage embryos to fresh droplets or larger volumes of global® HP, and culture to Day 5. For further culture to Day 6, transfer the embryos to fresh droplets or larger volumes of global® HP.

17. For transfer on Day 3 (cleavage stage) or Day 5/6 (blastocyst stage) wash the embryos, according to general laboratory practice, and transfer to the uterus in 20-30 µl of equilibrated global® HP.

18. Immediately prior to transfer, rinse the transfer catheter with global® HP.

19. Auf Day 1, place the zygotes into the equilibrated global® HP. Culture the embryos for 48 h (Day 3, 4-8 cell stage).

20. On Day 2, transfer the embryos to the cleavage-stage embryos to fresh droplets or larger volumes of global® HP, and culture to Day 5. For further culture to Day 6, transfer the embryos to fresh droplets or larger volumes of global® HP.

21. For transfer on Day 3 (cleavage stage) or Day 5/6 (blastocyst stage) wash the embryos, according to general laboratory practice, and transfer to the uterus in 20-30 µl of equilibrated global® HP.

22. Immediately prior to transfer, rinse the transfer catheter with global® HP.

23. Auf Day 1, place the zygotes into the equilibrated global® HP. Culture the embryos for 48 h (Day 3, 4-8 cell stage).

24. On Day 2, transfer the embryos to the cleavage-stage embryos to fresh droplets or larger volumes of global® HP, and culture to Day 5. For further culture to Day 6, transfer the embryos to fresh droplets or larger volumes of global® HP.

25. For transfer on Day 3 (cleavage stage) or Day 5/6 (blastocyst stage) wash the embryos, according to general laboratory practice, and transfer to the uterus in 20-30 µl of equilibrated global® HP.

26. Immediately prior to transfer, rinse the transfer catheter with global® HP.

27. Auf Day 1, place the zygotes into the equilibrated global® HP. Culture the embryos for 48 h (Day 3, 4-8 cell stage).

28. On Day 2, transfer the embryos to the cleavage-stage embryos to fresh droplets or larger volumes of global® HP, and culture to Day 5. For further culture to Day 6, transfer the embryos to fresh droplets or larger volumes of global® HP.

29. For transfer on Day 3 (cleavage stage) or Day 5/6 (blastocyst stage) wash the embryos, according to general laboratory practice, and transfer to the uterus in 20-30 µl of equilibrated global® HP.

30. Immediately prior to transfer, rinse the transfer catheter with global® HP.

31. Auf Day 1, place the zygotes into the equilibrated global® HP. Culture the embryos for 48 h (Day 3, 4-8 cell stage).

32. On Day 2, transfer the embryos to the cleavage-stage embryos to fresh droplets or larger volumes of global® HP, and culture to Day 5. For further culture to Day 6, transfer the embryos to fresh droplets or larger volumes of global® HP.

33. For transfer on Day 3 (cleavage stage) or Day 5/6 (blastocyst stage) wash the embryos, according to general laboratory practice, and transfer to the uterus in 20-30 µl of equilibrated global® HP.

34. Immediately prior to transfer, rinse the transfer catheter with global® HP.

35. Auf Day 1, place the zygotes into the equilibrated global® HP. Culture the embryos for 48 h (Day 3, 4-8 cell stage).

36. On Day 2, transfer the embryos to the cleavage-stage embryos to fresh droplets or larger volumes of global® HP, and culture to Day 5. For further culture to Day 6, transfer the embryos to fresh droplets or larger volumes of global® HP.

37. For transfer on Day 3 (cleavage stage) or Day 5/6 (blastocyst stage) wash the embryos, according to general laboratory practice, and transfer to the uterus in 20-30 µl of equilibrated global® HP.

38. Immediately prior to transfer, rinse the transfer catheter with global® HP.

39. Auf Day 1, place the zygotes into the equilibrated global® HP. Culture the embryos for 48 h (Day 3, 4-8 cell stage).

40. On Day 2, transfer the embryos to the cleavage-stage embryos to fresh droplets or larger volumes of global® HP, and culture to Day 5. For further culture to Day 6, transfer the embryos to fresh droplets or larger volumes of global® HP.

41. For transfer on Day 3 (cleavage stage) or Day 5/6 (blastocyst stage) wash the embryos, according to general laboratory practice, and transfer to the uterus in 20-30 µl of equilibrated global® HP.

42. Immediately prior to transfer, rinse the transfer catheter with global® HP.

43. Auf Day 1, place the zygotes into the equilibrated global® HP. Culture the embryos for 48 h (Day 3, 4-8 cell stage).

44. On Day 2, transfer the embryos to the cleavage-stage embryos to fresh droplets or larger volumes of global® HP, and culture to Day 5. For further culture to Day 6, transfer the embryos to fresh droplets or larger volumes of global® HP.

45. For transfer on Day 3 (cleavage stage) or Day 5/6 (blastocyst stage) wash the embryos, according to general laboratory practice, and transfer to the uterus in 20-30 µl of equilibrated global® HP.

46. Immediately prior to transfer, rinse the transfer catheter with global® HP.

47. Auf Day 1, place the zygotes into the equilibrated global® HP. Culture the embryos for 48 h (Day 3, 4-8 cell stage).

48. On Day 2, transfer the embryos to the cleavage-stage embryos to fresh droplets or larger volumes of global® HP, and culture to Day 5. For further culture to Day 6, transfer the embryos to fresh droplets or larger volumes of global® HP.

49. For transfer on Day 3 (cleavage stage) or Day 5/6 (blastocyst stage) wash the embryos, according to general laboratory practice, and transfer to the uterus in 20-30 µl of equilibrated global® HP.

50. Immediately prior to transfer, rinse the transfer catheter with global® HP.

51. Auf Day 1, place the zygotes into the equilibrated global® HP. Culture the embryos for 48
